PROFESSIONAL SUMMARY

Software Development Engineer and IIT Jodhpur graduate with experience in building scalable backend systems, cloud-native applications, and AI-powered platforms. Skilled in Python, distributed systems, AWS, and LLM-based application development.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL **| Frameworks:** FastAPI, Spring Boot, React, REST APIs, HTML5, CSS3

Databases & Caching: PostgreSQL (AWS RDS, Alembic), MySQL, Redis, SQLite (testing)

Cloud & DevOps: AWS (ECS, EFS, SES, ElastiCache, CloudWatch), Docker, GitHub Actions, CI/CD, Dokploy

AI & LLM Engineering: LLM Integration, RAG, AI Agents, MCP, AG-UI, Hugging Face, Ollama

Developer Tools: Git, GitHub, Postman, DBeaver, IntelliJ IDEA, VS Code, n8n

PROFESSIONAL EXPERIENCE

Software Development Engineer - I, LLM | Qure.ai | Jul 2026 - Oct 2026

- Engineered a shared, multi-tenant notification service adopted by 5 products, handling 200+ notifications daily; developed backend and frontend SDKs, idempotent ingestion, asynchronous delivery using Amazon ElastiCache for Valkey, tenant-level rate limiting, and integrations across Slack, SES, FCM, and in-app channels.
- Implemented cross-environment promotion of agent configurations and associated resources across Staging, Preprod, UAT, and Production, enabling repeatable agent releases; automated AWS ECS deployments using release-tag-triggered GitHub Actions workflows with environment-specific configurations and secrets.
- Developed a knowledge retrieval agent with an EFS-backed document processing pipeline, delivering source-grounded answers with confidence scores and citations; integrated Glean and Slack MCP to help client-facing teams resolve queries using reliable evidence.
- Developed and published an internal Python structured-logging library adopted across multiple backend services, standardizing log formats using a noun.verb.outcome convention, with configurable CloudWatch log groups, regions, and IAM-scoped log publishing to simplify debugging and centralized observability.

PROJECTS

Portfolio

ConsensusWorks - Collective Decision-Making Platform | Feb 2025 – Nov 2025 | GitHub
Java, Spring Boot, Python, FastAPI, Redis, MySQL, Docker, WebSocket, Thymeleaf

- Designed and Developed a real-time collaborative decision-making platform using the Bradley–Terry pairwise-ranking model and adaptive multi-round questioning, supporting 20 options per question and demonstrating 25% improvement in consensus scores over individual pre-session preferences in pilot testing.
- Architected modular Spring Boot and FastAPI microservices with Redis caching, optimized database queries, and WebSocket-based real-time communication; containerized and deployed the application on Railway, collaborating with IIT Jodhpur faculty on product design and validation.

SmartScribe - AI-Powered Media Understanding Platform | Jul 2025 | GitHub
Python, FastAPI, React, Whisper, Hugging Face, Ollama, Appwrite, Docker

- Addressed the challenge of searching lengthy audio/video recordings by building an end-to-end RAG pipeline that transforms unstructured media into searchable knowledge for context-aware retrieval and question answering.
- Integrated Whisper for transcription, Hugging Face embeddings for semantic retrieval, and Mistral via Ollama for contextual responses, achieving 30% improvement in response relevance across a manually curated evaluation set of 100 questions from 15 videos, with 70–90% Q&A accuracy and under 15-second response latency on CPU-only infrastructure.

API Rate Limiter - Configurable API Rate Limiting Gateway | Jun 2025 | GitHub
Java, Spring Boot, Redis, Thymeleaf, Chart.js

- Engineered a configurable, Redis-backed API gateway implementing Fixed Window and Token Bucket rate-limiting algorithms, with per-user quotas, FREE/PRO subscription plans, authentication, and a pluggable middleware architecture for extensibility across backend services.
- Achieved 3,200+ requests/min throughput with under 10 ms latency under stress testing; built an interactive admin dashboard for real-time traffic analytics, request auditing, and dynamic rate-limit configuration.

FinWise - Make Smart Money Decisions, Powered by AI | Feb 2026 - Apr 2026 | GitHub
Python, FastAPI, Groq AI, n8n, Yahoo Finance, Google News RSS

- Unified fragmented financial research workflows by developing an AI-powered platform that combines stock analysis, company and sector news, portfolio insights, and personalized personal finance and tax guidance.
- Engineered FastAPI-based stock analysis APIs integrating Yahoo Finance data and technical indicators (RSI, MACD, SMA-20), with Groq-powered financial analysis and n8n automation workflows for personalized market intelligence.

EDUCATION

Indian Institute of Technology, Jodhpur | 2022 - 2026
B. Tech in Computer Science and Engineering | GPA: **8.25/10.00**
